

Cable tray to fire control room

Overview

Install fire barriers within the tray to isolate different fire zones. When cable trays pass through walls or floors, seal openings using fire-rated penetration sealing materials. Cable tray installation must comply with specific technical standards to ensure electrical safety, system reliability, and long-term maintainability. This document outlines the key requirements for cable tray layout, installation, and fireproofing in industrial and commercial environments. At slab penetrations, provide 20–30 mm of firestopping and install a fire-support plate at the top. Cable trays are ubiquitous in modern infrastructure, serving as organized pathways for the vast networks of electrical. The following charts give the number of 3M pillows needed to completely firestop an opening that cable tray passes through. * Two (2) sticks of moldable putty (part number FSP-MPS) are also needed for each opening.
