

Dimensions of earthquake-resistant cabinets for dedicated power grids

Overview

Available in 24 configurations across 42RU, 44RU, and 48RU heights with depths from 30" to 48", each cabinet is rated for 3,000 lbs static load capacity with seismic load ratings from 770 to 877 lbs depending on configuration. This white paper outlines various standards related to electrical infrastructure and details the methods used to test and certify nVent HOFFMAN enclosures for earthquake resistance. Every day, hundreds of small to medium earthquakes rattle homes, buildings and other high-value structures globally. The use of Belden's Server and Switch Cabinets are certified to Seismic Zone 4 requirements, passing vibration and shock testing per GR-63-CORE Network Equipment Building System (NEBS) requirements with no structural damage in a certified lab. For different dimensions please contact your customer representative.
