

Distribution Box Label fxb

AI Overview

FXB series boxes are factory-sealed splice boxes used in hazardous locations, and labeling them ensures safe, organized, and compliant electrical circuit management.

FXB Series Overview The FXB Series from Killark is an aluminum feed-thru double-gang splice box designed for use with FXCS and FXS cover assemblies. These boxes are factory-sealed and suitable for Class 1 Division 1 & 2, Class 1 Zone 1 & 2 areas, providing Type 3, 7, and 9 protection for both indoor and outdoor use. They are UL Listed and CSA Certified, available in single and double gang configurations, and support ½" to 1" dead-end and feed-through connections. FXB boxes are commonly used for START/STOP motor functions, LED pilot light indications, and other control solutions in hazardous environments (Hubbell Killark FXB Series).

Purpose of Labeling Labeling FXB or any distribution box is critical for safety, efficiency, and compliance. A distribution box, or DB box, serves as a central hub that distributes electrical power from a main source to multiple circuits. Proper labeling helps:

- Identify each circuit clearly to prevent accidental shocks during maintenance.
- Facilitate troubleshooting and repairs by showing which breaker or fuse controls specific devices.
- Ensure compliance with electrical codes and safety standards.
- Document installation details for future reference or modifications (GEYA Distribution Box Guide).

Types of Labels For FXB boxes, labels can include:

- Circuit Detail Labels:** Self-adhesive labels that document up to 16 circuits, showing the devices or areas each circuit powers. These are often made of semi-gloss paper for easy writing and high visibility (Amazon Circuit Detail Labels).
- Pre-Printed or Custom Labels:** Durable vinyl or laminated labels for long-term use, resistant to fading or peeling.
- QR Code Labels:** Smart labels that allow digital tracking and remote management of circuits (Amazon Electrical Box Labels).

Best Practices for Labeling Number each circuit in the FXB box to match the breaker or fuse it connect...
