

Do power lines affect fiber optic cables How should they be connected

Overview

There are no interference problems with fiber optic cables and power cables. Fiber uses light for data transmission. OPAC cables can be installed on existing ground wires or phase conductors, even OPGW or OPCC to expand communications capacity. Special devices are required to prevent coronal discharge near towers and at drops for splicing because the high-electric fields around high-voltage. One way round this is to install aerial fiber cables close to power lines, such as on mixed use poles which also carry electricity. Obviously, these fiber cables need to be resistant to electricity, which can be difficult as many aerial cables contain high tensile steel (HTS) for tensile strength. ntly, there are a limited number of industry documents that address the requirements for optical fiber cables near high voltage circuits. This strength member can be made of steel or insulating material.
