

Does the router show if the fiber optic cable is cut

Overview

Your modem, router, ONT, switch, or media converter may show a red alarm light, no optical link, or a “LOS” indicator, which usually means “loss of signal.” The LOS light on your router indicates the status of your internet connection to the Internet Service Provider (ISP). When it's green and steady, everything is fine. While service providers often address these issues swiftly, immediate action is sometimes crucial, especially when working remotely or in urgent need of internet access. Several factors. Despite their robustness, fiber networks can fail due to: Physical Damage : Cuts, bends, or contamination in fiber cables or connectors. Hardware Failures : Faulty transceivers, switches, or routers. When a fiber line has a problem, the symptoms may look like slow internet, dropped connections, no signal. The kind of damage shown will introduce attenuation/loss at worst, which, if it was a problem, would make the connection not work at all, or possibly intermittently. No, packet loss can occur with just damaged fiber. But this fiber does not look.
