

## **Fiberglass stiff-tailed large fish with glow-in-the-dark glider**

### **AI Overview**

Glo Fish Sticks are luminescent fiberglass rods with stiff tails and interlocking ends, designed to glow in the dark and glide through obstacles for wire installation or similar applications. Product Overview Glo Fish Sticks are made from luminescent fiberglass, which allows them to glow in the dark, improving visibility in low-light conditions and making it easier to navigate through walls, ceilings, or under carpets. Each rod is three feet long and features interlocking ends, so multiple rods can be connected to achieve the desired length, up to 15 feet. Design Features Stiff Tail: The rods are rigid enough to maintain their shape while pushing or pulling through tight spaces, preventing folding or bending under pressure. Glow-in-the-Dark: The luminescent material ensures the rod is visible in dark or enclosed areas, helping users track its path and avoid obstacles. Interchangeable End Attachments: Each package includes a bullet nose for smooth guidance and a hook attachment for pulling or pushing wires. Diameter: The rods have a 1/4-inch diameter, providing sufficient rigidity while remaining lightweight. Applications While primarily marketed for wire installation, the design resembles a stiff-tailed fish glider, making it suitable for tasks where a fish-like, gliding motion is beneficial. Its glow-in-the-dark feature can also be useful for nighttime or low-light operations, or as a novelty tool for demonstrations or educational purposes. Availability These rods are available for purchase online, including Amazon and the Gardner Bender official website, with options to buy single rods or sets that extend up to 15 feet. In summary, Glo Fish Sticks combine a stiff, fish-like tail, glow-in-the-dark visibility, and modular glider functionality, making them a versatile tool for navigating obstacles in dark or confined spaces.
