

High and Low Voltage Switchgear Electrical Box

Overview

LV Switchgear is ideal for final distribution systems within buildings and small facilities. Think MCCs, HVAC systems, and indoor panels. Found in utility substations, power plants, and metro rail. Choosing between High Voltage (HV) and Low Voltage (LV) switchgear is critical for your power system's safety, cost, and performance. Pick the wrong one, and you risk equipment damage, unnecessary costs, or compliance issues. Fundamentally, these classes are defined by the specific voltage levels they are engineered to manage. It is the core component of the power system, so it is responsible for the control, protection and isolation of circuits and equipment, and is also used to regulate power flow, quickly cut off. This handbook is dedicated to electricians and future electricians, and explains the contents of high and low voltage switchboards.
