

How to get the cable into the optical fiber terminal box

Overview

Extending the fiber through the box makes use of a cable entry gland. Fasten the cable to the clamps or ties to assure the cable is immovable. Remove the cable jacket and buffer coating material so as to loose. The fiber termination box is an interface between the fiber cable from the line side and the pigtails to be passed to the fiber distribution frame. The corresponding label or code can be marked for each connection separately for future maintenance and management. In addition, it is necessary to ensure that all. Learn how to install a fiber optic termination box step-by-step for FTTH projects. Covers mounting, splicing, routing, labeling, and testing for indoor/outdoor use. It functions as a junction between the incoming fiber cable and the outgoing customer-side fiber cable, where one fiber can be spliced, patched. Connect the fiber optic cable: Use fiber optic cutting pliers to cut the fiber optic cable at the specified length, and clean the end of the fiber optic cable to flatten and expose the fiber.
