

How to reset and restart a fiber optic communication box

AI Overview

You can reset your fiber optic communication box using a soft reset (power cycle) or a hard reset (factory reset), depending on the issue.

Precautions Before Resetting

- Backup your settings:** Note your Wi-Fi network name, password, and any custom configurations, as a hard reset will erase them.
- Disconnect devices:** Unplug all connected devices, including routers, computers, and phones, to prevent data loss.
- Check with your ISP:** If unsure, contact your internet service provider for guidance, especially before performing a factory reset.

Soft Reset (Power Cycle)

A soft reset is the simplest method and often resolves minor connectivity issues.

Locate the ONT: Usually mounted on a wall near your electrical panel or where the fiber enters your home.

Unplug the power cord: Do not unplug the fiber optic cable itself.

Wait 30–60 seconds: Allow the device to discharge completely.

Plug the power cord back in: Reconnect and wait for the ONT to boot up. This may take a few minutes.

Check indicator lights: Look for the “optical” or “internet” light to turn solid green.

Test your internet connection: Ensure devices can connect and speeds are stable.

Hard Reset (Factory Reset)

Use a hard reset only if a soft reset does not resolve the issue, as it restores factory settings and may require ISP re-activation.

Locate the reset button: Usually a small recessed button on the back or bottom of the ONT.

Press and hold the button: Use a paperclip or pin for 10–15 seconds while the ONT is powered on.

Release and wait: The ONT will reboot and cycle through indicator lights.

Contact your ISP if needed: Re-activation or reconfiguration may be required after a factory reset.

Additional Tips

- Check power sources:** Ensure the ONT is plugged into a working outlet; reset GFCI outlets if necessary.
- Battery backup units:** If attached, temporarily disconnect battery leads before resetting.
- Observe indicator lights:** They provide val...
