

## Imported Micro Module 1U

### AI Overview

The Imported Micro Module 1U is a compact Eurorack microphone module that converts vocals, instruments, and environmental sounds into audio for modular systems. Overview The Intellijel MEMS Mic 1U is a 1U Eurorack module designed to provide high-quality audio input in a very small footprint, ideal for modular synthesizer setups with limited space. MEMS (Micro-Electro-Mechanical System) microphones are extremely small, mounted on a printed circuit board, and protected by a mechanical cover, making them durable and precise. Key Features Audio Input: Captures vocals, instruments, environmental sounds, and even feedback for creative sound design. Frequency Response: Very flat across a wide range (~6 Hz to 20 kHz), ensuring accurate sound reproduction. Stereo Capability: Two units can be patched and modulated independently for stereo effects. CV Modulation: The fader can act as an attenuator when modulated via control voltage (CV). Activity Indicators: LEDs show power status and overload risk. Low-Frequency Roll-Off: Fixed switch at 180 Hz (6 dB per octave) for consistent frequency response. Applications This module is ideal for: Integrating live audio into a Eurorack system. Experimental sound design using environmental or feedback sounds. Compact setups where space is limited but high-quality audio input is needed. Compatibility The module fits 1U Eurorack rows, including standard and Intellijel formats, and can be combined with other 1U modules like VCAs, attenuators, and MIDI interfaces. Adapters are available for integrating 1U modules into 3U cases if needed. The Imported Micro Module 1U is a versatile, compact solution for musicians and sound designers seeking high-quality audio input in a small Eurorack format.
