

Insufficient internet speed after upgrading fiber optic router

Overview

Restarting your router is one of the easiest ways to resolve minor internet speed issues. Often, these devices just need a fresh reboot to clear out temporary glitches and restore your connection to full speed. How to do it: Unplug your router. Wait for about 60 seconds. Fiber can improve the connection coming into your home, but it can't automatically fix what happens after that signal reaches your router, your Wi-Fi, or, ultimately, whichever devices you want to use. Think you know your routers from your repeaters — put your home networking know-how to the. With upload and download speeds that often exceed 1,000 Megabits per second (Mbps), fiber optic internet has the capacity to provide a seamless online experience while powering all of your connected devices at once. So, when your fiber internet doesn't deliver, it can be a huge letdown. I have the router positioned in the same spot in all scenarios explained, It's only 20 feet from my gaming console. I was expecting dl speeds of 900+ on wired connection and 600+ on wifi when close to router, what I am getting is 100 (dl) on wired and max of 350mb on wifi when sitting on top of the router, other rooms in my apartment are getting. There are many reasons why you may have a slow internet connection, and speeding up the internet on your client devices isn't always easy. We've provided some general and basic troubleshooting suggestions here already, but we would like to show you something different in this story.
