

Mechanically Adjustable RF Attenuator

Overview

Variable attenuators provide continuously or step-adjustable loss to set path gain or emulate fading while maintaining good return loss. They are used for AGC loops and test fixtures, specified by range, flatness, insertion loss, and power handling.

EM-based RF digital twin capturing RF IC behavior across substrates, layouts, and transitions. We offer a robust portfolio of in-stock, adjustable RF attenuators and phase shifters for multiple applications, including test instrumentation, cellular communication, wireless communications, satellite communication and more. RF attenuators are devices used to reduce the power level of radio. Planar Monolithics (PMI) offers the highest quality RF and Microwave, Solid State digital and analog controlled attenuators for commercial, industrial, and military applications. 015 dB and operating frequency ranges up to 50 GHz in Octave. Over 400 coaxial, surface mount, and MMIC attenuator models for 50-Ohm & 75- Ohm system including fixed attenuators, high-power attenuators, digital step / programmable attenuators, voltage variable attenuators and more! Input power up to 2W Max.
