

Mini-modular data center pricing

Overview

The average cost per kW for a modular data center ranges from \$7,000 to \$12,000, depending on capacity, redundancy level, and specific features (Schneider Electric, 2023). This represents significant variability based on configuration choices and site requirements. The cost of building a standard data centre has risen 47% since 2020. The vendors who quote you €X per kW without those inputs are either. Covers construction speed, cost per MW, deployment models, leading vendors, and when modular makes sense. Modular construction compresses this to 12-20 weeks for the modular components, with total. According to a 2024 report by Grand View Research, the global micro data center market is projected to grow at a CAGR of 17.3% from 2024 to 2030, reaching a valuation of \$6.
