

New Zealand Electricity Cable Tray Models

AI Overview

Cable tray construction in New Zealand involves selecting durable, compliant systems for electrical and data cabling, with options including steel, wire mesh, and ladder trays, supported by local manufacturers and professional installation services.

Types of Cable Trays

- Steel Cable Trays:** Durable and suitable for commercial and industrial projects, steel trays provide strong support for electrical and data cabling. They are available in pre-galvanized, hot-dip galvanized, or powder-coated finishes, allowing for corrosion resistance and aesthetic customization (Equip Supply, Steel & Tube).
- Wire Mesh Cable Trays:** Fabricated from stainless steel rods (T304/316), wire mesh trays allow air circulation to keep cables cool and resist corrosion, making them ideal for natural and food-processing environments. They come in various widths (60mm–600mm) and sidewall heights, with accessories like bends, risers, and mounting brackets for flexible layouts (S.E.P).
- Cable Ladders and Baskets:** These provide open support for heavy-duty cabling, allowing easy access for maintenance and modifications. Ladder trays are often used in industrial or infrastructure projects where large bundles of cables need support (Steel & Tube, MSS).

Installation Considerations

- Planning and Layout:** Proper installation begins with accurate takeoffs and layout planning, often supported by BIM modeling for complex sites. This ensures efficient routing, compliance with NZS 4219 seismic standards, and fire safety requirements (MSS).
- Mounting and Supports:** Cable trays are mounted using brackets, hangers, and supports, which may be pre-drilled or welded on-site. Accessories like centre dividers, conduit supports, and joining plates help organize cables and maintain structural integrity (S.E.P).
- Compliance and Safety:** Installations must comply with local standards, including seismic bracing (NZS 4219) and fire pr...
