

No internet access even when connected to the router via fiber optic cable from China Telecom

Overview

This can happen even when Wi-Fi appears to be available. Update network adapter drivers and enable automatic IP address assignment. This can help avoid conflicts that cause “connected without internet” issues. If issues continue, contact your Internet Service Provider. It often has brand names like Huawei on it. Your Ethernet cable is plugged in, the link light is blinking, and your computer says it is connected — but websites, apps, and updates still will not load. This problem usually comes down to one of five things: a bad local network setting, a router or modem issue, DNS failure, an IP address. Are you connected to a network but don't have internet access?

If you're on your phone or computer, you can notice the Wi-Fi icon is enabled, but the website you're trying to visit isn't loading. It's one of the. If your internet service provider (ISP) isn't reporting an outage, you may be left rooting through software and hardware settings until something clicks, either literally or figuratively.
