

Optical access switch

Overview

It is the core component of the optical access network, which is equivalent to a switch or router in a traditional communication network and is also a multi-service providing platform. It provides fiber optic interface to the user's passive optical network. The ONU is responsible for: ONUs operate at Layer 1 and Layer 2 (physical and. Some routers let you use a VPN for safe remote access. Business routers can handle more devices and have extra features like VLANs. This. An Optical Network Unit (ONU) is a device used to terminate an optical fiber link at the user premises, typically in a business or residential environment. Essentially, the OLT is the brains of the FTTH network, controlling how. The ONU can effectively improve the uplink bandwidth utilization of the entire system and configure channel bandwidth based on the network application environment and service characteristics.
