

PNP type fiber optic sensor

Overview

Fiber optic sensor features NPN/PNP, NO/NC output modes for selection. It has fast response, high frequency, anti-electromagnetic interference, ambient light resistance, easy to install and maintain. Mouser offers inventory, pricing, & datasheets for PNP Fiber Optic Sensors. *2 One or two more units connected: -20 to +55 °C (-4 to +131 °F); 3 to 10 more units connected: -20 to +50 °C (-4 to +122 °F); 11 to 16 more units connected: -20 to +45 °C (-4 to +113 °F). When using 2-outputs, one unit is counted as two units. All temperature regulations are for when the unit is. Product will be phased out and can be ordered until 2026-11-30.

WLL80P-22T6Y1DZA71Z1Z1 Sensing range max. Due to the light's tight focus, they can detect subtle or rapid motions over a long distance. They are not affected by electromagnetic. *1 Use a cable length of 30 m or less for M8 connector types.

Fiber Optic Sensor Amplifier

The fiber optic amplifier sensor is a high speed, single (PNP) output fiber optical
amplifier, also referred to as a fiber sensor. The single PNP with light compensation
sensor amplifier is typically mounted to

photoelectric sensor pnp npn fiber optic sensor

Why PNP/NPN Matters Most with Fiber Optics? While the photoelectric sensor principle
is core, and the fiber optic sensor construction solves physical challenges, the PNP or
NPN output
