

Price of a single-phase complete electrical distribution box

AI Overview

A complete single-phase household distribution box typically costs between £50 and £200, depending on brand, capacity, and features.

Price Range and Factors

For standard residential use, single-phase distribution boards are designed to safely distribute electricity to lighting, appliances, and other household circuits. Prices vary based on:

- Number of circuits:** Boards with more circuit slots cost more. Typical household boards range from 4 to 12 circuits.
- Amperage rating:** Common ratings are 63A or 100A; higher ratings increase cost.
- Brand and quality:** Leading brands like Eaton, Hager, and Schneider offer reliable boards at higher prices.
- Safety features:** Boards with integrated MCBs, RCDs, or RCBOs are more expensive but provide enhanced protection.
- Enclosure type:** Lockable or weather-resistant boxes for outdoor installation carry a premium.

Retailers in the UK, such as Falcon Electrical, offer single-phase distribution boards starting around £50 for basic models, with more advanced or larger boards priced up to £200 or more. CEF and ENRG Tech also provide a range of options with similar pricing, including professional-grade units suitable for light commercial use.

Additional Considerations

Installation costs: Professional installation is recommended for safety and compliance with electrical codes, which adds to the total expense.

Accessories: Busbars, mounting kits, and labeling may be included or sold separately.

Long-term value: Investing in a high-quality board reduces maintenance and potential electrical hazards.

In summary, for a typical household, expect to pay £50–£200 for a complete single-phase distribution box, with the final cost influenced by capacity, safety features, and brand.
