

Price range of long-span cable trays in Grenada

AI Overview

Long-span cable trays typically cost between \$10 and \$50 per meter, depending on material, type, and installation complexity.

Price Ranges by Material

Steel trays: \$10–\$30 per meter. Steel is strong, durable, and widely used for general-purpose installations, making it the most cost-effective option for many projects.

Aluminum trays: \$20–\$50 per meter. Aluminum is lightweight and corrosion-resistant, ideal for humid or coastal environments like Grenada.

Fiberglass (FRP) trays: \$10–\$50 per meter. FRP is suitable for aggressive environments, offering long-term durability but higher upfront costs.

Stainless steel trays: Higher-end option for extreme durability and corrosion resistance, often exceeding \$50 per meter.

Long-Span Considerations

Long-span trays are designed to be supported at 14–20-foot intervals, reducing the number of supports needed and potentially lowering installation costs for outdoor or industrial applications. Extra-long spans may exceed 20 feet, which is useful for crossing roads or large open areas. The span length affects tray strength, so selecting the right material and thickness is critical to ensure safety and longevity.

Installation and Additional Costs Installation costs in Grenada may vary due to labor rates, shipping, and import duties. Additional expenses include:

- Supports, brackets, and connectors

- Splice plates for long spans

- Labor for mounting and alignment

Complex installations, such as outdoor or high-load environments, can increase the total cost per meter.

Practical Estimate for Grenada For a long-span galvanized steel ladder tray, a reasonable estimate would be \$15–\$35 per meter, including basic supports but excluding specialized coatings or custom designs. Aluminum or FRP trays may cost \$25–\$50 per meter, especially for outdoor or corrosive environments.

Bulk orders or local suppliers may reduce costs, while imported trays could increase...
