

Sis optical cable

Overview

offers a full range of fiber optic cables designed for precise signal performance across structured cabling environments, datacenters, and enterprise networks. Why Choose SIS Fiber Cables?

High-grade optical materials for long service life. Every module undergoes full signal integrity testing to ensure stable performance across Cisco, Juniper, HPE. Siemon 100G QSFP28 Active Optical Cable (AOC) assemblies offer a highly reliable and cost-effective alternative to transceiver assemblies available in lengths ranging from 0.5 m to 100 m, beyond the range of Direct Attach Copper Cables (DAC). The internal wiring must withstand these conditions to ensure long-term reliability. While standard building wire might seem sufficient, its insulation can. Amphenol's 100G QSFP28 to QSFP28 Active Optical Cable assemblies are a reliable, cost and power efficient, integrated solution which is ideal for high density signal transmission typically seen in most storage, data centers and high performance computing applications with fiber cable length up to. For use in internal wiring of electrical equipment, control panels, switchboards, and appliances or for use as motor leads. For use as permitted in NEC Article 310. 90°C Wet or Dry, 600 Volts.
