

Small Dual Power Supply Distribution Box

AI Overview

A small dual power distribution box is a compact unit designed to manage multiple power inputs and outputs safely, often featuring modularity, fuses, and waterproofing for versatile applications.

Overview Small dual power distribution boxes are compact units that allow multiple devices or circuits to be powered from one or two main sources. They are commonly used in CCTV systems, LED setups, vehicles, industrial machinery, and temporary power setups. These boxes often include fuses, circuit breakers, or relays to protect connected devices and ensure safe operation.

Key Features

- Dual Power Inputs:** Some models accept two separate power sources, allowing redundancy or switching between main and backup power.
- Modular Design:** Many small boxes, such as the type 10 and 11 series, offer modular configurations for different combinations of inputs and outputs, making them adaptable to specific needs.
- Protection:** Options include fuses, MINI® circuit breakers, and PTC protection, which safeguard connected devices from overloads.
- Waterproof and Dustproof:** Certain models, like the HWB60-AL series, feature IP68/IP69K ratings, thermoplastic covers, and gaskets for outdoor or vehicle use.
- Compact and Portable:** Units like Lex Products' Load Master® series are designed for space-saving, transportable setups, suitable for temporary or mobile applications.
- Customizable Outputs:** Some boxes allow adjustable current ratings and configurable connector layouts to match specific equipment requirements.

Applications

- Security and Surveillance:** Powering multiple CCTV cameras or access control devices from a single box.
- Vehicles and Machinery:** Serving as a main or auxiliary power distribution block in small vehicles or agricultural machinery.
- Temporary Power Solutions:** Ideal for events, construction sites, or emergency setups where compact, reliable power distribution is needed.
- Industrial and Entertainment:** Supporting lighting, audio, or other equipment requiring multiple DC or AC outputs.
