

What are the clamps for cable trays

AI Overview

Clamps on cable trays are used to secure covers, organize cables, and ensure mechanical stability, with different types suited for perforated, mesh, or solid trays. Types of Cable Tray Clamps

- PKP-SP1 Clamp – Designed for perforated cable trays; it is screwed into position to secure the tray cover, providing extra mechanical fastening in demanding conditions such as vertical installations or exposure to wind.
- PKP-SP2 Clamp – Also for perforated trays but does not require tools for installation; it snaps into place for quick fastening.
- PKP-SPM1 Clamp – Used for mesh cable trays; it is screwed in position to hold the cover securely.

Other general cable clamps include adhesive clamps, cable tie mounts, metal clamps, and rubber-lined clamps, which can be used to organize cables within the tray or attach them to walls, ceilings, or floors.

Step-by-Step Installation

- Plan the Route** – Before installing clamps, ensure the cable tray route is clearly marked, considering clearance, load capacity, and cable separation.
- Select the Right Clamp** – Match the clamp type to your tray (perforated, mesh, or solid) and the installation environment.
- Position the Clamp** – Place the clamp over the tray cover or cable bundle at the designated location. For screw-type clamps, align the holes with the tray perforations.
- Secure the Clamp** – Tighten screws for PKP-SP1 or PKP-SPM1 clamps using appropriate tools. For snap-on clamps like PKP-SP2, press firmly until it locks in place.
- Check Stability** – Ensure the cover or cables are held firmly without movement. For long runs, space clamps evenly to prevent sagging or displacement.
- Organize Cables** – Use additional cable ties or straps if needed to separate and secure cables within the tray, maintaining neatness and compliance with electrical standards.
- Final Inspection** – Walk through the installation to check for loose clamps, misaligned trays, or unsupported spans, and adjust as necessary.

Best Practices

- Space clamps according to tray type and load, typically 1.5 to 3 meters apart.
- Always follow manufacturer instructions for torque a...
